

GRAPHENE RESEARCH TEAM LEADER ADDRESSES ROYAL SOCIETY

We are pleased to announce that Dr Mainak Majumder, a director of Iconic Industries, our wholly owned graphene technology subsidiary, will present at a Royal Society conference in London. Dr Majumder is a Senior Lecturer in the Department of Mechanical and Aerospace Engineering at Monash University and is the Group Leader of the Nanoscale Science and Engineering Laboratory (NSEL),

The scientific meeting, titled '*Nanostructured carbon membranes for breakthrough filtration applications: advancing the science, engineering and design*', will feature talks by the leading researchers on filtration from the UK, France, USA, Switzerland, Germany, South Korea and Australia.

Dr Majumder will speak on '*Graphene-based fluidic systems: From compact micro/nano-fluidic devices to large area filtration membranes*,' at 9am GMT (18:00 Eastern Standard Time) on Tuesday April 28.

The world's oldest and most prestigious scientific society, presided over by the likes of Sir Isaac Newton and Sir Joseph Banks, The Royal Society presents a world attention-calling platform for the important topics of the age. In this case the concern is water purity and the way that carbon based membranes can efficiently desalinate seawater and treat wastewater. Dr Majumder's team has made considerable advances in this area.
